

Aysu YAVUZ
Chief Executive Officer

Haluk Tümer YAVUZ
Chairman of the Board

We embarked on a journey in 1993 where we promised that every step would take us forward. We have seen the world through a window that we built with our values and expanded with our experiences, and we have always set our sights on the future. While undertaking life-changing projects in Turkey and other places in the world, we have grown with the values we give to mankind, and we have risen with the strength gained from our experience. We have added value to your buildings in many different areas from aluminum and steel façade systems to PVC, and from stainless steel to sunshade systems. We have never given up on our goals or strayed from our path not even for a moment. With every step we took on our journey, we understood that we are going to continue bringing the future into the present.

WE...

WE ARE MOVING TOWARD INNOVATIVE GOALS

In line with our vision and quality perspective, we constantly renew ourselves, make investments, and take our goals one step further in every achievement we make.

WE BRING DREAMS TO LIFE

For those who shape the rise of a building with their drawings and ideas, we think about every detail and become the real-life counterpart of dreams in the fields of architecture and engineering.

WE TAKE EVERY STEP INTO THE FUTURE

We closely follow the developments in the world and see every idea produced with an innovative perspective and vision as a step toward the future.

DEVELOPMENT KNOWS NO LIMITS

We take our European-standard manufacturing quality further every day and as we resolutely advance toward our goals, we continue to expand and raise the bar for quality.

WE ALWAYS ILLUMINATE OUR WAY WITH OUR EXPERIENCES

Since 1993, we have been using the knowledge we acquired to build our dreams and we have been building up our experiences so that every day is better than the previous one.

WE DRAW OUR STRENGTH FROM OUR EXPERTISE

With our strong technical staff, we have been undertaking projects with very different characteristics for many years, growing ever stronger as we specialize and heading into new successes with every part of us.

OUR REACH IS GLOBAL

We carry our quality and experience to all four corners of the world, and we continue our activities as one of the leading companies in the sector which is not just in Turkey but also in the markets of Europe, the Balkans, the Commonwealth of Independent States, and the United States of America.

WE STRIVE TO ALWAYS BE THE BEST

With the systems we developed in our own R&D and the systems of the world's giant companies that we are solution partners with, we add value to every structure we touch, and we are working with all our might to be the best.

WE ARE BECOMING ONE WITH NATURE

Aware of "Respect for the Environment," we use our resources most efficiently and consider it our priority and our duty to increase energy efficiency, protect the environment, and reduce pollution.

WE LOOK AT LIFE FROM MANY ANGLES

From project design and import to manufacturing and installation, we complete the façades of countless projects around the world and touch lives in different areas with our versatile service approach.

... BRING THE FUTURE TO THE PRESENT

FACTORY and TECHNOLOGY CENTER

With the responsibility of being one of the façade companies that steer the sector, we in the Pimeks Group are continually developing our production lines to meet the requirements of projects, while manufacturing in our factory of 40,000 m2, of which 25,000 m2 is enclosed, with the latest technology. We are active in Europe, the United States, the Balkans, and the CIS in addition to Turkey.

In our Technology Center, which consists of our R&D, Design Center, and Showroom building, we present to our customers not only the systems we produce but also the systems we apply as partners of the world's giant companies.

HEAD OFFICE TECHNOLOGY CENTER

In our Head Office located in a more central part of Ankara, we mostly serve architects on boutique projects. We showcase our wide variety of products and system options to our customers in our showroom there.

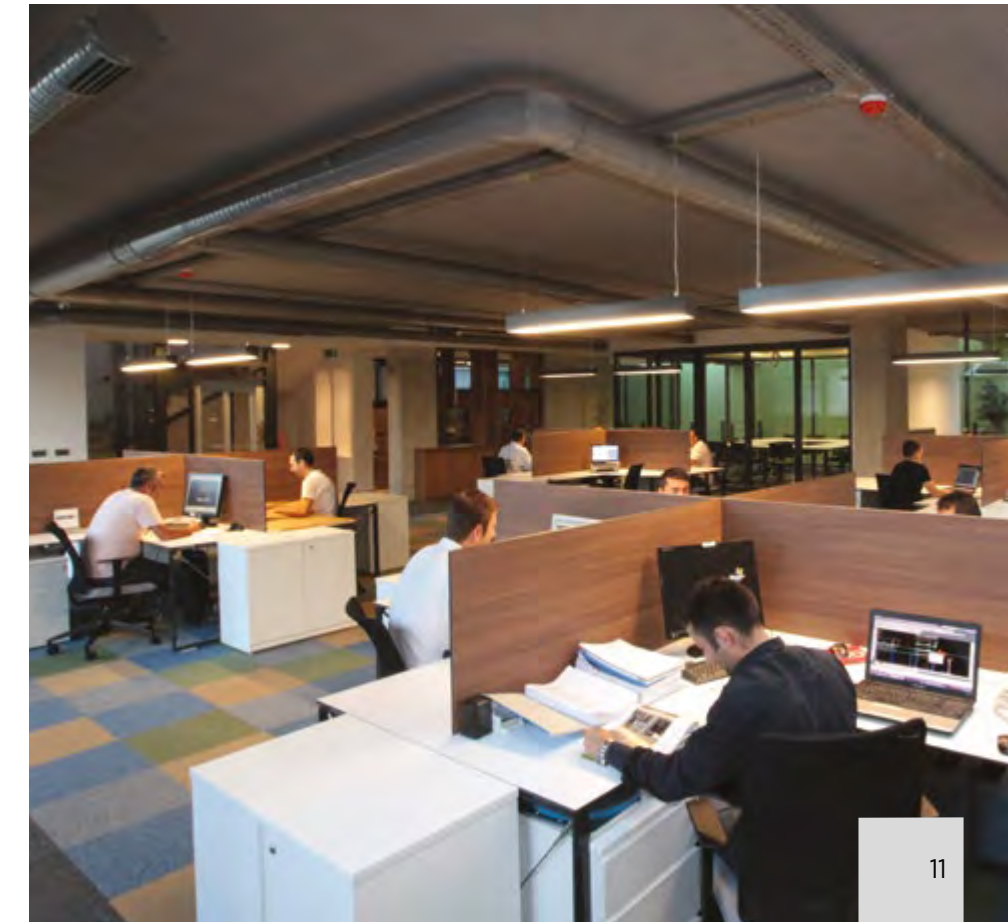

DESIGN

Considering developing technologies and building solutions that redeem for themselves, making the façade of a building requires much more than just manufacturing façades and joinery. As Pimeks Group, with our Design Center, where our strong technical staff is located, we carry out project design work according to the building's requirements with precision, and with the systems of the world's giant companies that we are solution partners with, we are making a lasting mark on hundreds of projects we do both domestically and abroad.

Whenever we make the façade for a building, we see it as our legacy for the future, and we care about the engineering aspect of our business.

MANUFACTURE

With our manufacturing quality in European norms and the certificates we hold, we are one of the sector's leading companies in many innovations. We work with the awareness that quality service cannot be measured by product quality alone, and we support our product quality with our high-end manufacturing and service.

As a group, we have turned all the experience and gains we have acquired over the years into investments, and these investments have not been limited to enlarging our factory area and increasing the machinery equipment, but Pimeks Group, too, has developed and grown together with our employees, which we see as our most important gain.

We develop high quality projects with high quality materials, each one different and unique in the sector.

QUALITY CONTROL AND LOGISTICS

We export not only our systems developed by our R&D but also the systems of the solution partners we have working with, to different areas of the world. We care not only about product quality but also maintaining a high level of total service, and we carry out production in line with each country's expectation of standards with the certificates we possess, and we ship according to international standards.

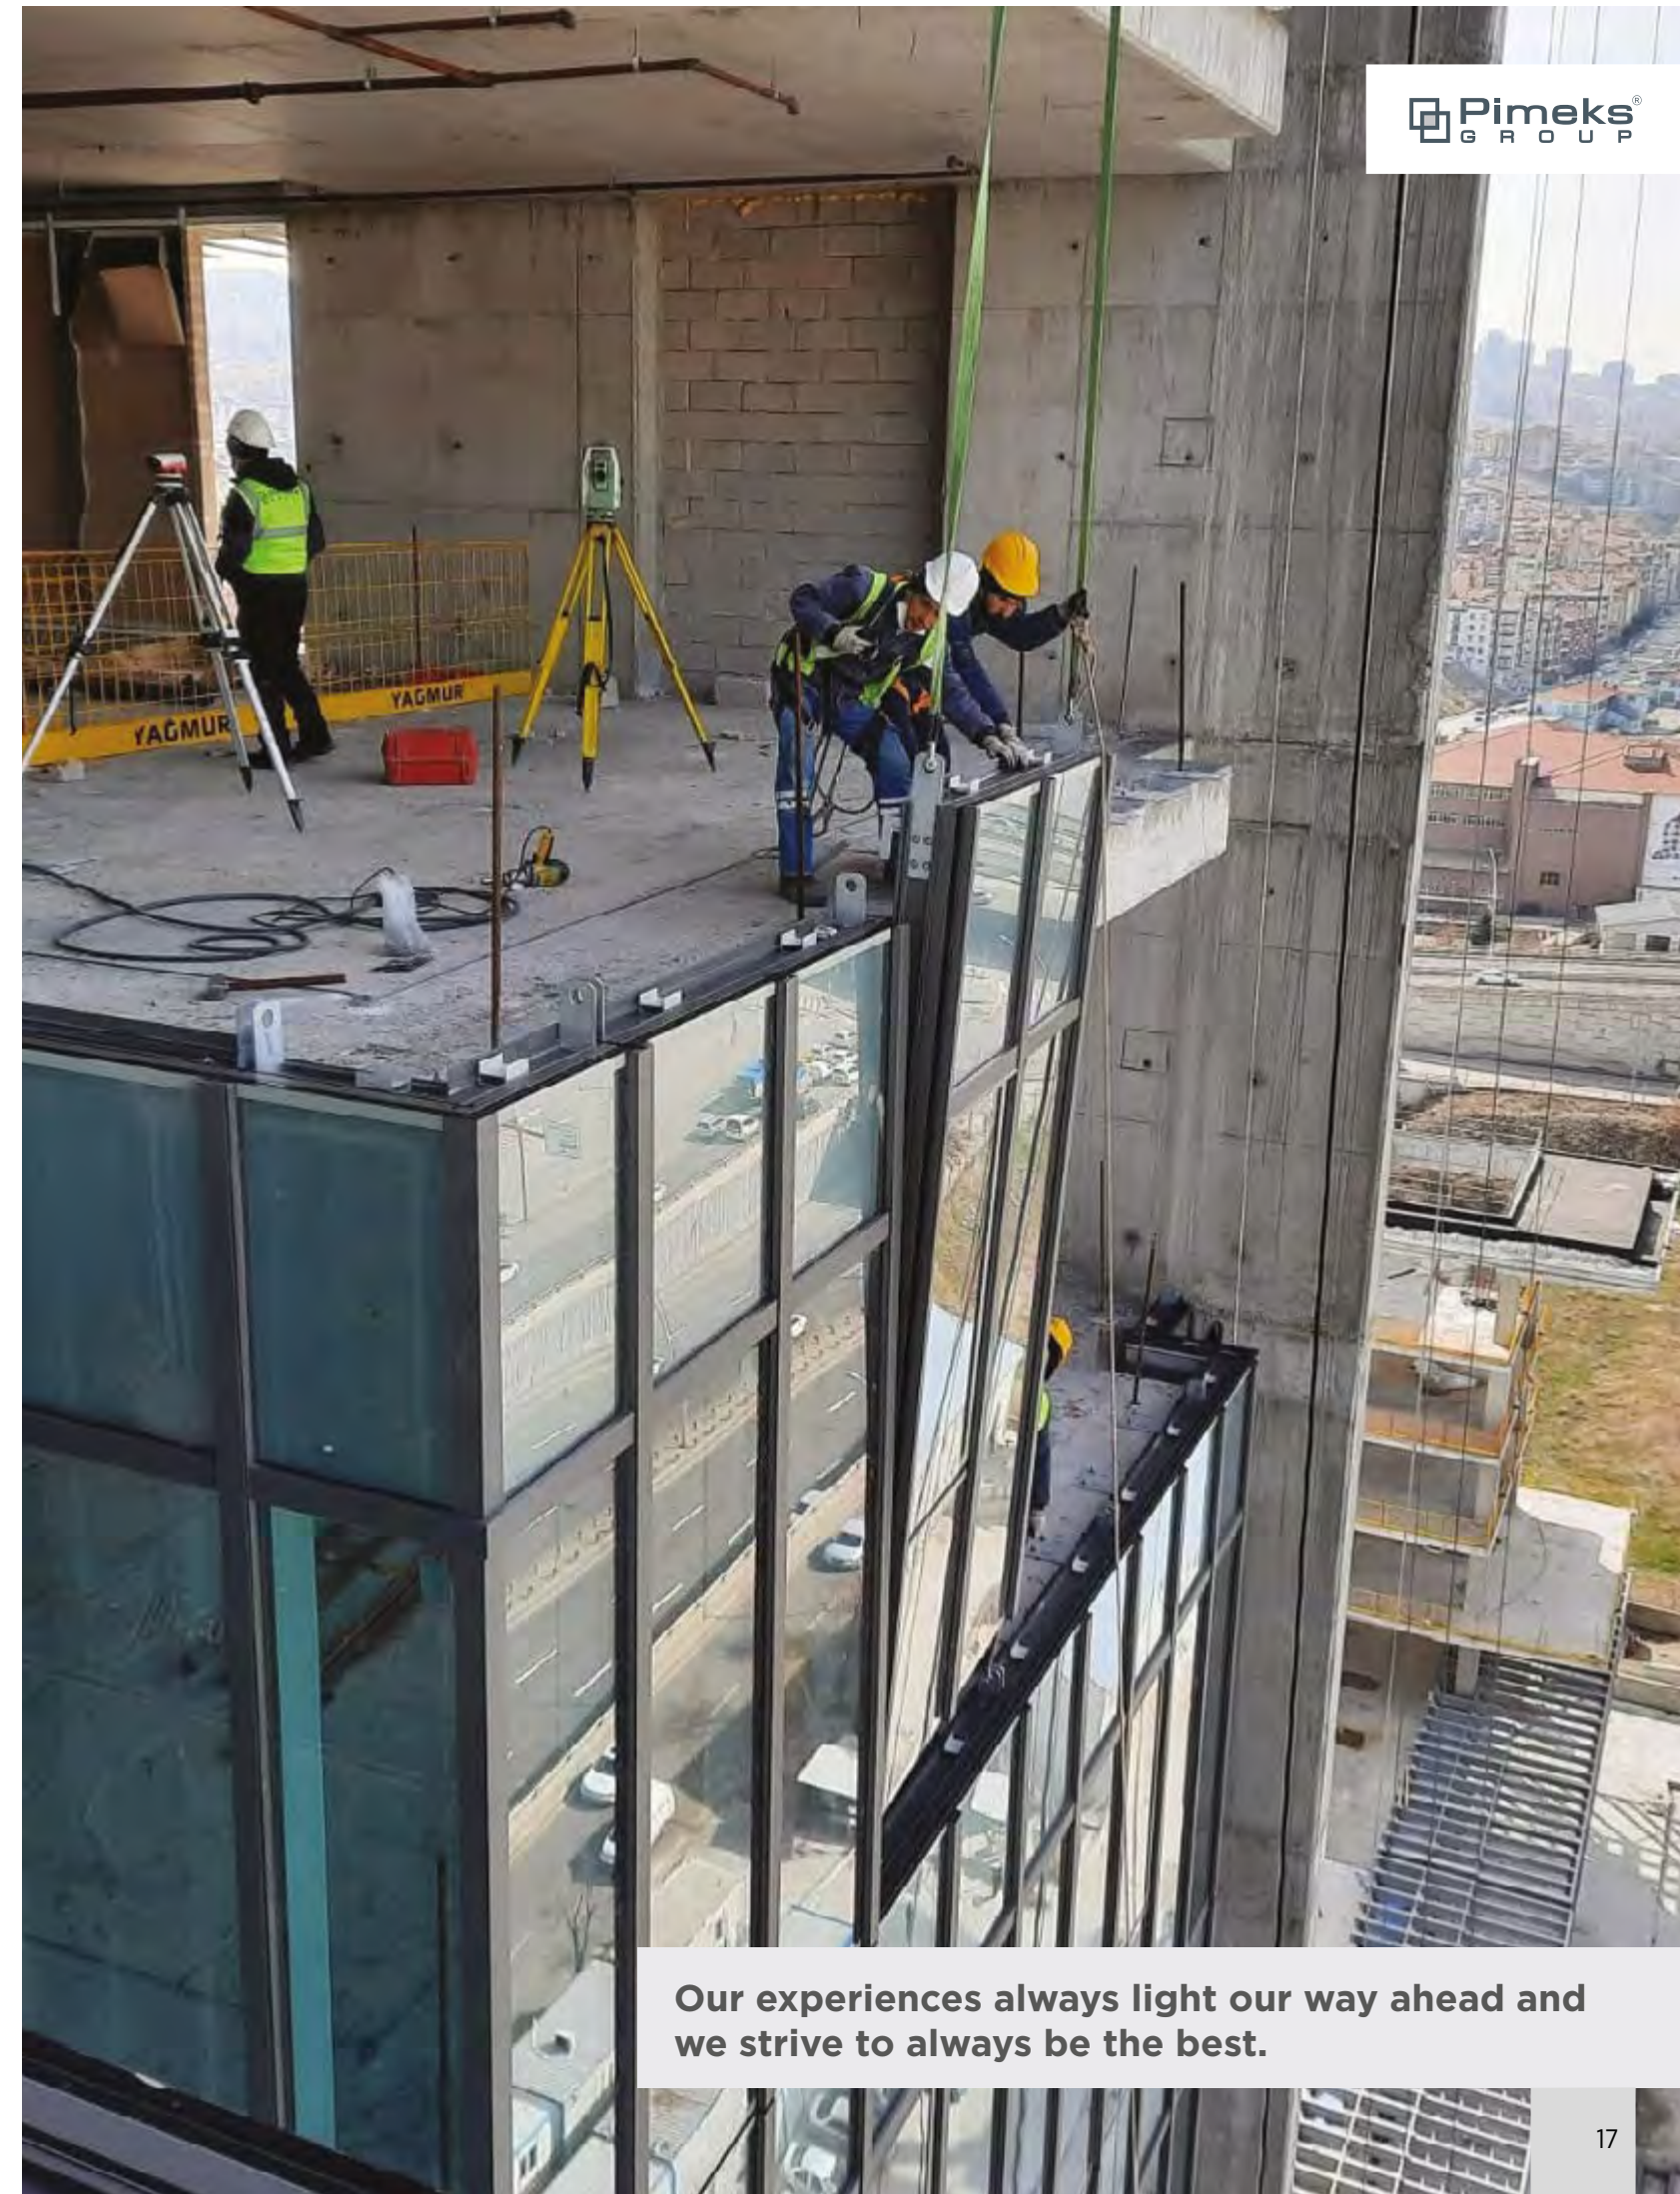

We have faith in our quality, and we proudly send Pimeks branded products all over the world.

INSTALLATION

Installation is the final step that gives life to buildings, and we provide this service in different regions. With our experienced project and installation teams, we offer not only quality products but also quality installation service.

Our experiences always light our way ahead and we strive to always be the best.

TRAINING ACTIVITIES

We know that learning never ends and we are constantly improving ourselves. We do not restrict these training activities by only to Pimeks employees; we also organize and host the training programs for architectural and civil engineering university students at our Technology Center.

While bringing dreams to life, we are always learning and sharing what we learn with young people.

ORGANISATIONS

We care about the synergy we create with all the stakeholders we work with. We meet up with those who lead the sector through our traditional Pimeks organized activities. Through these activities that we organize not only with the architects, developers, and investors whose projects we have brought to life over the years but also with every member of the Pimeks Group family, we believe that we have crowned our business with joy and good memories.

We in the Pimeks family look at life from a multidimensional perspective and we move forward with the leaders of the sector.

Sapphire

DESIGNER COLLECTION

Each forest on the earth has a special spirit that reflects a unique feeling which makes it exceptional and distinctive. This is the intrinsic reality that inspired us to create our Designer Collection. Taking the characteristic design in the nature as sample, we have regenerated the unique spirit of forests.

Black Forest

Monteverde

Daintree

Amazon

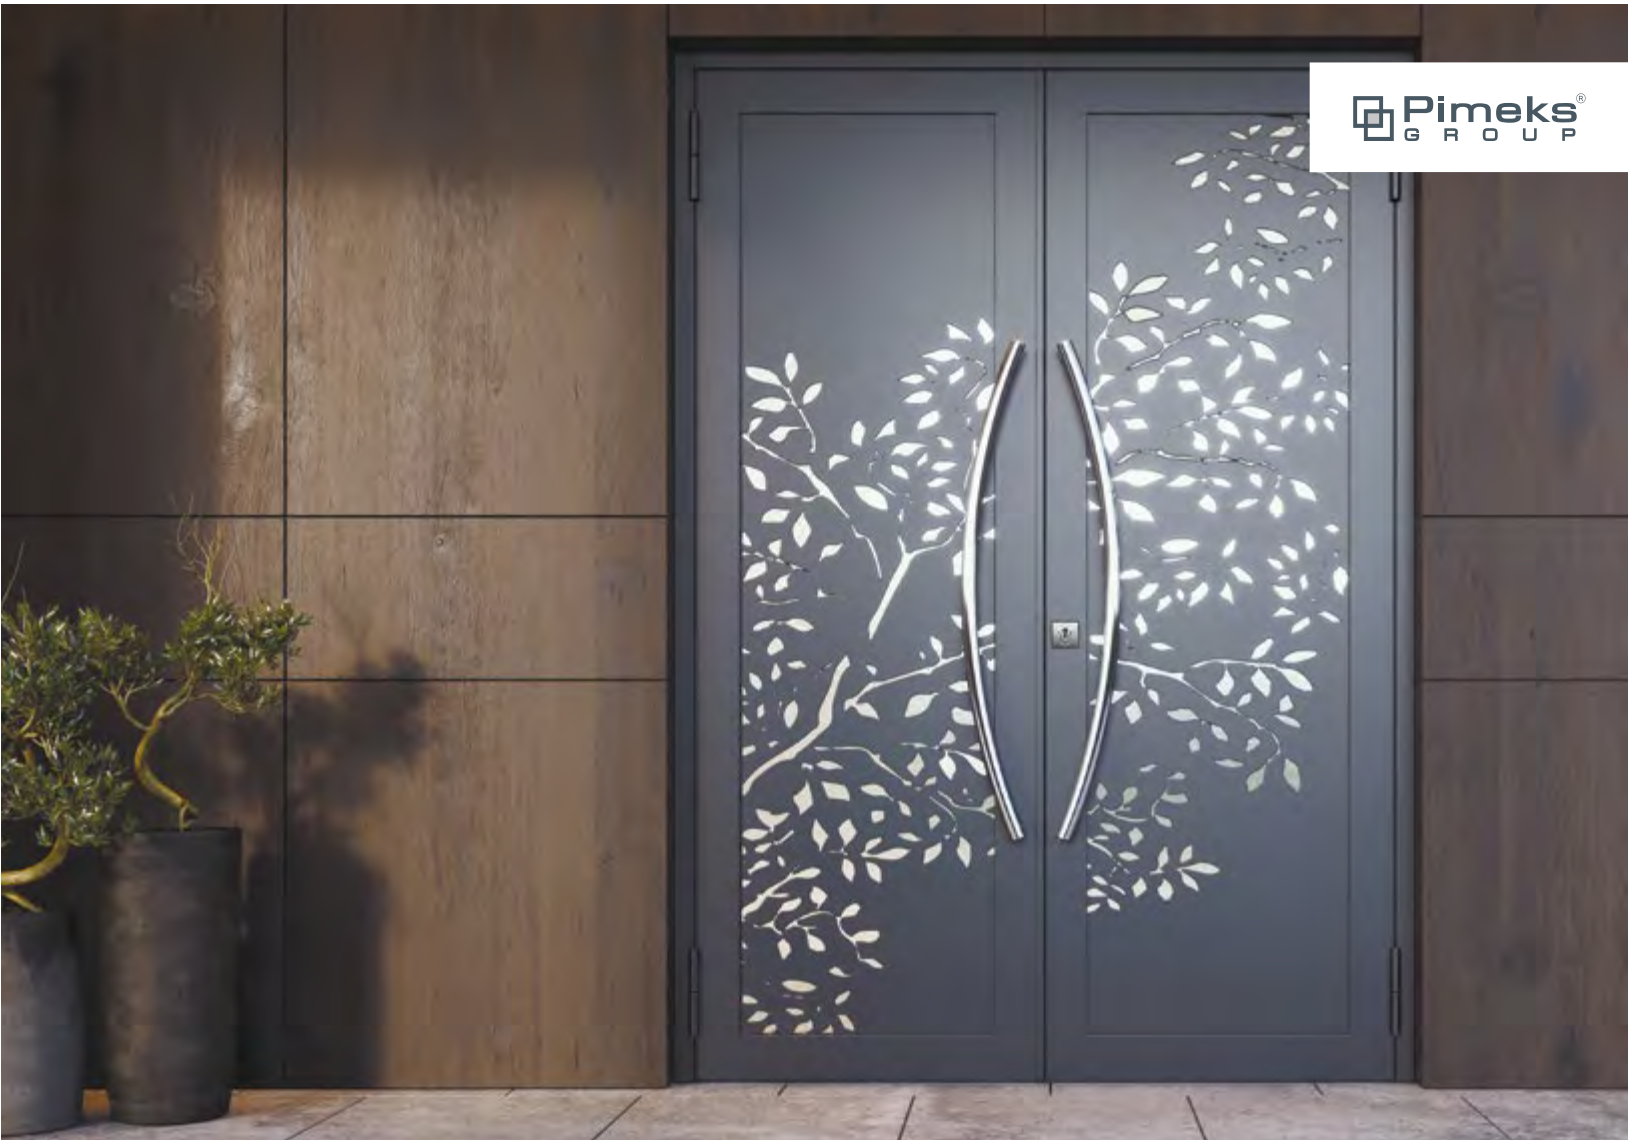

Sagano

Sumatra

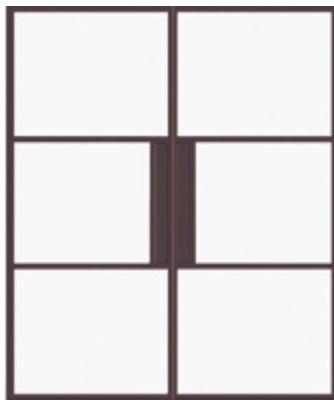

Hallerbos

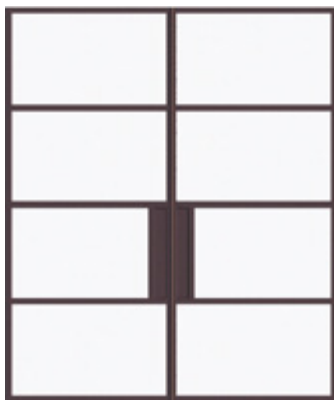

STEEL COLLECTION

Each star has its own story. Out of the countless stars floating in the sky, no one is the same with another; but they have a common feature: they all have an attractive light. The fascinating nature of the stars inspired us to create The Steel Collection. So, we entrusted the exceptional spirit of stars that carry their lights to furthestmost distances.

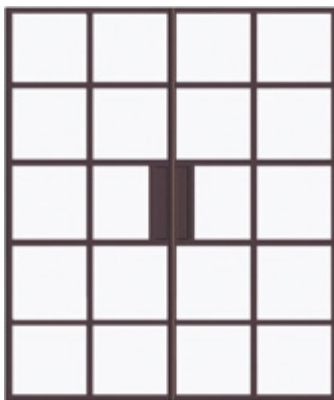

Rigel

Bellatrix

Comet

Sirius

ARCHITECTURAL COLLECTION

Each single piece of land shaped on the face of the earth is quite a sight with its extraordinary features. This is the why we call them as works of art that reflects the power of time. The natural structures in different parts of the world were our source of inspiration in creating The Architectural Collection. Our motivation was to bring those glamorous structures to your home range.
